### Please note the following markings:

A	= Model with armrests
P	= Model with upholstery

**Glide element** (pictured: Glide element at the front)

**2-component glide element**

**Felt glide element**

**Plastic glide element**

## The right glide element for the JUMPER Ply Four.

The glide elements used for chairs must be compatible with the floor covering. Otherwise, damage may be caused to the floor as, for example, in the case of the combination of plastic glide element and elastic floor covering. That is why we have worked together with the flooring manufacturer Armstrong DLW AG to develop the 2-component glide element for plastic floor coverings. Although this is also suitable for other floor coverings, it is nevertheless not always the optimum solution. Below you will find an overview of which glide element is recommended for which floor covering.

Floor covering	Optimum glide element	Alternative glide element
<b>soft:</b> - Carpet - Needle felting	<b>Plastic glide element</b>	<b>2-component glide element</b> but with reduced glide properties
<b>elastic:</b> - Linoleum - PVC - Rubber	<b>2-component glide element</b>	<b>Felt glide element</b> Regular cleaning necessary, e.g. with hard brush
<b>very hard:</b> - Parquet - Tiles, natural stone, stoneware - Sealed floor screed	<b>Felt glide element</b>	<b>2-component glide element</b>

**Caution:** Glide elements are wear parts and are therefore not covered by the unit's warranty. Worn, very dirty or missing glide elements can damage floor coverings. To ensure correct operation, we recommend that you examine the glide elements at appropriate intervals and replace them if necessary.
